

For each situation described below draw a displacement vs time graph that accurately as possible describes the situation.

1. A man steps out of his house and walks to the mail box in front of his house.

- At the mail box he pauses while fumbling through the mail.
- He turns and walks back to his house pausing half way there to smell a flower.
- After smelling the flower he runs into the house.

2. A flea watches a yo-yo pass him while he rests on a drawer that is at the mid-point of the yo-yo's motion.

- The first thing the flea sees is the yo-yo passing him at a constant velocity on the way down.
- The yo-yo pauses at the bottom.
- It then travels past him on the way up to the yo-yo master's hand.
- The yo-yo's motion never ceases as the yo-yo master throws it down again.
- On the way down the string gets twisted and yo-yo stops at the exact height of the flea.
- After a moment it slowly drifts down to the end of the string.

## Kinematics From Graphs

3. A cat and mouse are playing together. The cat has baited the mouse with a piece of cheese resting in front of himself.

- The mouse slowly walks towards the cheese.  $\frac{1}{4}$  the way to the cheese he gets spooked and runs back to the safety of a small rock.
- The mouse, this time, walks more quickly towards the cheese.  $\frac{1}{2}$  the way to the cheese he gets scared and runs back to the safety of a small rock.
- The mouse runs towards the cheese.  $\frac{3}{4}$  the way to the cheese he gets nervous and runs back to the safety of a small rock. But  $\frac{1}{4}$  the way to the rock he changes his mind and runs back towards the cheese faster than ever before.
- The mouse picks up the cheese and begins to run back to the rock a little slower now.
- The cat begins to chase the mouse and the mouse begins to move his fastest yet by taking big jumps towards the rock.
- He passes the rock and continues  $\frac{1}{4}$  the distance past the rock
- Pauses (He realizes the cat was actually being chased by a dog)
- Walks back to the rock.

[illegible]

## Kinematics From Graphs

4 Find the slope of the line with its appropriate units.

- 5 Which single second time interval contains the greatest positive velocity?
- 6 Which single second time interval or point in time contains the greatest negative velocity?

- 7 Which single second time interval contains the greatest positive velocity?
- 8 Which single second time interval contains the greatest negative velocity?

Each change or bend is a segment of the line. They are identified by the letters in the circles.

- 9 Which straight line segment(s) has the greatest absolute value of velocity?
- 10 Which line segment(s) contains the smallest non-zero velocity? (absolute value)
- 11 Which segment(s) shows a positive velocity?
- 12 Which segment(s) shows a negative velocity?
- 13 Which segment(s) shows the smallest non-zero velocity?
- 14 Which segment(s) has the greatest negative velocity?
- 15 Which segment(s) has the greatest positive velocity?
- 16 What is the velocity at 4.5 seconds?
- 17 What is the velocity at 1.8 seconds?
- 18 What is the velocity at 4.5 seconds?
- 19 What is the average velocity from 2.0 to 6.0 seconds?
- 20 What is the average velocity from 2.0 to 4.8 seconds?

Each change or bend is a segment of the line. They are identified by the letters in the circles.

- 21 Which line segment(s) or point in time has the greatest absolute value of velocity?
- 22 Which segment(s) has the greatest negative velocity?
- 23 Which segment(s) has the greatest positive velocity?
- 24 What is the velocity at 9.0 seconds?

Each change or bend is a segment of the line. They are identified by the letters in the circles.

- 25 Which straight line segment(s) has the greatest absolute value of velocity?
- 26 Which straight line segment(s) has the smallest non-zero velocity?
- 27 Which segment(s) has the greatest negative velocity?
- 28 Which segment(s) has the greatest positive velocity?
- 29 What is the velocity at 0.8 seconds?
- 81 What is the velocity at 4.2 seconds?
- 82 What is the velocity at 5.0 seconds?
- 83 What is the average velocity from 1.8 to 5.4 seconds?
- 84 What is the average velocity from 0.4 to 3.2 seconds?
